

1-EZ Diet Appetite Suppressant

Being overweight can lead to life degenerating conditions including diabetes, coronary artery disease, high blood pressure, and even cancer. America is the fattest country in the world. It's no wonder why so many American's have become health conscious in the past 10 years. Diet trends such as Atkins and the South Beach diet have seen an overwhelming response, and diet supplementation products such as Ephedra flew off of the shelves when available. Most companies produce a be-all, end-all diet product. Maximum International understands that people are not created equal, and that different individuals have different vices. The 1-EZ Diet product line was created to give people the benefit of choosing a supplementation product that works for them. We have received great response from retailers and consumers alike regarding our 1-EZ Diet line of products, and especially concerning Appetite Suppressant and our Fat & Carb Blocker.

Appetite Suppressant

Appetite Suppressant is a breakthrough nutritional dietary formula that reduces hunger unlike most diet products. Most products merely speed up the nervous system, which to be effective, usually causes unpleasant jittery (and sometimes dangerous) side effects. Appetite Suppressant addresses the underlying cause of food cravings. It curtails hunger by stabilizing blood sugar, enhancing metabolic processes to utilize foods more effectively, and by gently stimulating the nervous system with reputable herbs long valued for their safe use and energizing qualities. People who use Appetite Suppressant report feeling more satisfied with smaller meals and for longer periods.

Marketing Initiatives

Maximum International promotes the 1-EZ Diet line with national print advertisements in prestigious magazines such as Cosmopolitan, Self, Women's Health and Fitness, Woman's Day, Alternative Medicine and Let's Live, to name a few.
